- **Meeting Platform** Using BigBlueButton Api

## INDUSTRIAL PROJECT EXPERIENCE

---

### **Project #1 : Customer Relationship Management (CRM)**

**Role : Frontend Developer**

**Team Size : 6**

This product, CRM, is a web application for our client to track and maintain the leads obtained from various sources by authorized users of the system. Leads are the potential customers who can provide revenue against the course offerings from Our Client. The Webapp design party will be responsible for developing the end-to-end solution of Webapp.

#### **Responsibilities:**

- Designed the page using React, reviewed code and debugged errors to improve performance.
- Created Components & Services, routing, Http calls
- Giving demos to clients and getting approvals for design.
- Developed clear specifications for project plans using customer requirements.
- Wrote clear, clean code for project
- Resolving Accessibility Issues in entire Application.

**Technologies:** HTML5, CSS3, JavaScript, React JS.

### **Project #2 : Human Resource Management System**

**Role : Frontend Developer**

**Team Size : 7**

When a new candidate joins, there are some forms that need to be filled in by HR like CDF form, form F, form 11, EPF form etc. this web application to automate it. Candidates must fill in all the required details in this application. HR can directly Download those forms and takes a print of all the forms.

#### **Responsibilities:**

- converting Documents into Html pages
- Turn mockups and designs into pages complete with CSS, HTML, JavaScript & React.
- Created Services, Component and Template.
- Implemented Re-usable components.

**Technologies:** HTML5, CSS3, JavaScript, React JS, Redux.

### **Project #3 : Candidate Evaluation portal**

**Role : Software Developer**

**Team Size : 8**

It was an online examination platform which allows the company to conduct timed online exams/tests in a safe and secure online environment.

We had three roles ADMIN, SUPERVISOR, CANDIDATE based on the roles we used to navigate users.

#### **Responsibilities:**

- Extensively worked in Design part to easily understand the questions of the Candidate.
- Providing new solutions for the time slots.
- Used Integration to get the data from Database
- Working in coordination with the design and the testing team to develop better products with fewer bugs

**Technologies:** HTML5, CSS3, JavaScript, React JS.
